fibrin

An elastic filamentous protein derived from fibrinogen by the action of thrombin, which releases fibrinopeptides A and B from fibrinogen in the coagulation of blood; a component of thrombi, vegetations, and acute inflammatory exudates such as in diphtheria and lobar pneumonia. [L. fibra, fiber]

Stedman's Medical Dictionary 27th Edition

platelet

An irregularly shaped disklike cytoplasmic fragment of a megakaryocyte that is shed in the marrow sinus and subsequently found in the peripheral blood, where it functions in clotting. A *p.* contains granules in the central part (granulomere) and, peripherally, clear protoplasm (hyalomere), but no definite nucleus; is about one-third to one-half the size of an erythrocyte; and contains no hemoglobin.

SYN: Bizzozero corpuscle, blood disk, elementary bodies (2), elementary particle (1), third corpuscle, thrombocyte, thromboplastid (1), Zimmermann corpuscle. [see plate]

plasmin

A serine proteinase hydrolyzing peptides and esters of l-arginine and l-lysine and converting fibrin to soluble products; occurs in plasma as the precursor plasminogen (profibrinolysin) and is activated to plasmin by organic solvents, which remove an inhibitor, and by streptokinase, trypsin, and plasminogen activator, all cleaving a single arginyl-valyl bond; *p.* is responsible for the dissolution of blood clots. SYN: fibrinase (2) , fibrinolysin.
